                                                                                                                                                  The patent discloses a complex comprising of a B class ephrin and PDZ domain containing protein. B class ephrins function as ligands for Eph receptor tyrosine kinases (RTK) and possess a transmembrane element and a highly conserved cytoplasmic tail at the C-terminus, that contains a PDZ binding site. This complex is used in methods to modulate the interaction of a B class ephrin and PDZ domain containing protein and to identify modulator compounds. It is also used for modulating cellular processes like, axonogenesis, nerve cell interactions and regeneration of nerve cells. The complex is also useful for treating proliferative or differentiative disorders associated with this protein complex. The present sequence is the human ephrin B1 C-terminal cytoplasmic domain, comprising conserved sequences reminiscent of known or predicted binding sites for PDZ domains. Ephrin B1 is also known as LERX-2, Elk-L, PDZ domains. Ephrin B1 is also known as LERX-2, Elk-L, PDZ domains.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            PDZ domain; B class ephrin; Eph receptor tyrosine kinase; RTK; modulator; cellular process; nerve cell interaction; regeneration of nerve cell; axonogenests; antiproliferative; proliferative disorder; treatment; differentiative disorder; human; cytoplasmic domain.

The invention useful in developmental biology and in elucidating cell signalling and cell-cell interactions in higher eukaryotes for the development of insecticides, therapeutics and pharmaceutical drugs. The invention discloses genomic DNA sequences (ABLIGITS-ABLIGIT), expressed DNA sequences (ABLIGITS) and the encoded proteins
                                                                                                                                                                                                                                                                                                                                                                                                                                                                            Sequence
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    The sequence data for this patent did not form part of the printed specification, but was obtained in electronic format directly from
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 New isolated nucleic a

                                                                                                                                                                                                                                                                                                        The invention relates to an isolated nucleic acid detection reagent capable of detecting 1000 or more genes from Drosophila. The invention useful in developmental biology and in elucidating cell signalling and cell-cell interactions in higher eukaryotes for the development of insecticides, therapeutics and pharmaceutical drugs. The invention discloses genomic DNA sequences (ABL101840-ABB1675) and the encoded proteins (ABL101847-ABB16175) and the encoded proteins
                                                                                                                                                                                                                             The sequence data for this patent did not form part of the printed specification, but was obtained in electronic format directly from at ftp.wipo.int/pub/published_pct_sequences.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           Eff-2 (also known as EHK-1L) is an Eph transmembrane tyrosine kinase family ligand. It has homology with B61 (Eff-1) (see ARR82604). Eff-2 ends in a C-terminal hydrophobic sequence that appears to to be a recognition sequence allowing it to be GpI-linked and thus lacking in an intracellular domain. Eff-2 is useful for identifying other ligands for Ehk-1, -2, -3, Eck and Elk receptors. The ligands are useful in promoting a differential function and/or influencing the phenoty, such as growth and/or proliferation, of receptor bearing cells. They may be used in the diagnosis, and treatment of neurological disorders.

Hek-L is the first known ligand for hek and can be used to study cellular processes regulated by hek (which may be involved in tumorigenesis) It is also an immunogen for antibody production, as a reagent for detecting hek or hek-L in in vitro assays, to determine binding of detecting hek or hek-L in invitro assays, and to carry diagnostic or

A fragment of murine Lerk-6 DNA was isolated by PCR for use a probe for a human Lerk-6 homologue. The probe however led to the identification of a human Lerk-7 gene (see ART32699). The Lerk-7 gene and protein can be used for studying the role of Lerk-7 in conjunction with elk, hek and eck receptors. They can also be used for delivering diagnostic or therapeutic agents to cells, e.g. cancer cells. The Lerk-7 proteins can also exhibit neuroprotective or neurotrophic properties and can be used to treat neural tissue disorders.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             Example 1; Page 35; 49pp; English

The protein may also be used as a delivery agent, taking diagnostic and therapeutic agents to cells expressing such receptors. LERK-6 can also be used as a tissue culture reagent to enhance the viability or prolong the lifespan of the neurons. Neural tissue disorders and injuries may be treated by
                                                                                                                                                                                                                                                                                                                                                                LERK-6 polypeptide; hek receptor; elk receptor; human; murine; cell proliferation; neural growth; neural tissue; neurological neurodegenerative; excitotoxicity.
The invention relates murine and human LERK-6 polypeptides that bind hek/elk receptors. Host cells transfected or transformed with vectors comprising the LERK-6 nucleic acid sequences are used for the recombing production of the proteins. LERK-6 polypeptides may be useful in the
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           Sequence

LERK-6 may be employed in treating neurodegenerative conditions where there is neural death, excitotoxicity. In addition, they may be administered to a mammal to exert a trophic effect on neural tissue. They can also be used as reagents for those conducting quality assurance studies e.g. to monitor shelf life and stability of elk protein under different conditions. The polypeptides can also be used as carriers for delivering agents attached to cells bearing the elk or hek cell surface receptor. The present sequence represents a
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                enhancement, stimulation, prolifthek or elk receptor. It is the product of a cDNA clone (AAR1500) obtd. from an embryo mid- and hind-brain cDNA expression library. This cDNA is used for the productor of recombinant Elf-1, which can be used to modulate proliferation, survival and/or differentiation of cells and tissues, and to stimulate or antagonise intracellular signal transduction pathways mediated by the EPH-type receptor.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 Murine and chicken EPH receptor ligand, Elf-1 - useful in diagnosis and treatment of disorders associated with the Elf-1 gene, e.g.

                                                                                                                                                                                                                                                                                                                   The present sequence represents a mammalian RPH receptor ligand designated Blf-1. This ligand can bind to both mek-4 and sek-AP. Blf-1 a tyrosine kinase ligand, which is linked to the membrane through a phosphatidylinositol linkage. It shares some homology to 2 other BPH receptor ligands, B61 and LRRK-2. The Blf-1 protein modulates proliferation, differentiation and survival of EPH receptor-expressing cells by stimulating or antagonising intracellular signalling mediated by the EPH receptor. Typical of many potential applications are increasing survival of neuronal cells in culture (e.g. where intended framsplantation), also therapeutically in increase neuron survival (e.g. treatment of Alzheimer's or Parkinson's diseases), to prevent nervous system and lymphatic tumours, to induce differentiation of
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         Nucleic acid encoding Elf-1 protein that binds to EPH-type - for production of Elf-1 protein, useful for regulating proliferation, differentiation, and survival of cells
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       Cheng
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 31-MAY-1995;

                                                                                                                                                                                                      B
                                                                                                                                                                                                                                Ś
                                                                                                                                                                                                                                                                                                                                                       The invention relates murine and human LERK-6 polypeptides that bind to chek/elk receptors. Host cells transfected or transformed with vectors comprising the LERK-6 nucleic acid sequences are used for the recombinant comprising the LERK-6 nucleic acid sequences are used for the recombinant components of the proteins. LERK-6 polypeptides may be useful in the component of the proteins. LERK-6 polypeptides may be useful in the component of the proteins of the proteins of the proteins of the complex may be involved in computating growth, development and/or maintenance. LERK-6 can be used for treating disorders of neural tissue such as injury or neurological compurodegenerative conditions where there is neural death, excitotoxicity. In addition, they may be administered to a mammal to exert a trophic conducting quality assurance studies e.g. to monitor shelf life and stability of elk protein under different conditions. The polypeptides can also be used as carriers for delivering agents attached to cells bearing the elk or hek cell surface receptor. The present sequence represents a trophic conducting the conducting collappetide.

AAC98773 to AAC99231 encode the human pancreatic cancer associated proteins, called pancreatic cancer antigens, given in AAB54008 to CC AAB54466. The human pancreatic cancer antigens have cytostatic, neuroprotective, nootropic, immunomodulatory, relaxant, contraceptive, gynaecological, cardiant and antiinflammatory activities, and can be used concerning, treating, or ameliorating a medical condition or in assays for diagnosing a pathological condition or a susceptibility to one in a concerning can be identified. The proteins and the activity of the proteins can be identified. The pancreatic cancer antigens can be used to graventing antieris to the antigens can be used to garcies can be identified. The pancreatic cancer antigens can be used to garcreatic cancer antigens can be used to design nucleic candists and antagonists to the antigens can be used to design nucleic candispositic methods. The proteins can be used to generate antibodies can define the used to purify detect and target the polypeptides, including continue and in vivo and in vitro diagnostic and therapeutic methods. The proteins can be used to generate antibodies can definite antibodies can defin

diagnosis;
                                                                                                                                                                                                                                                                                                           A novel chicken EPH receptor ligand, Elf-1 (AAR94767), is involved in the formation and maintenance of ordered spatial arrangements of differentiated tissue. It is the product of a cDNA clone (AATLS009) obtd. from an embryo cDNA expression library. This cDNA is used for the produ. of recombinant Elf-1, which can be used to modulate proliferation, survival and/or differentiation of cells and tissues, and to stimulate or antagonise intracellular signal transduction pathways mediated by the EPH-type receptor.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            Murine and chicken EPH receptor ligand, {\tt Elf-1} - useful in diagnosis and treatment of disorders associated with the {\tt Elf-1} gene, e.g.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   Region

                                                                                              The present sequence represents an avian EPH receptor ligand designated Elf-1. This ligand can bind to both mek-4 and sek-Rp. Elf-1 is a tyrosine kinase ligand, which is linked to the membrane through a phosphatidylinositel linkage. It shares some homology to 2 other EPH receptor ligands, B61 and LERK-2. The Elf-1 protein modulates proliferation, differentiation and survival of EPH receptor-expressing cells by stimulating or antagonising intracellular signalling mediated by the EPH receptor. Typical of many potential applications are increasing survival of neuronal cells in culture (e.g. where intended for transplantation), also therapseutically in increase neuron survival (e.g. treatment of Alzheimer's or Parkinson's diseases), to prevent nervous system and lymphatic tumours, to induce differentiation of hepatocytes to form an artificial liver, to induce cartilage and bone
                                                                                                                                                                                                                                                                                                                             Nucleic acid encoding Elf-1 protein that binds to EPH-type receptor - for production of Elf-1 protein, useful for regulating proliferation, differentiation, and survival of cells

                              The sequence is that of a novel protein designated hek-L, a protein that can bind hek (a cell surface receptor tyrosine kinase). Hek-L is the first known ligand for hek and can be used to study cellular processes regulated by hek (which may be involved in tumorigenesis). It is also an immunogen for antibody production, as a reagent for detecting hek or hek-L in in vitro assays, to determine binding of hek proteins, to purify hek proteins, and to carry diagnostic or cytotoxic agents to particular leukaemia cells that express the hek antign. Hek-L also binds the elk tyrosine kinase receptors.
                                                                                                                                                                       New isolated DNA encoding hek-L protein or its fusion useful as assay reagent or for carrying therapeutic andiagnostic compounds to leukaemia cells.
